

## **The Silver Springs Benchmark**

### **Ministry of Health & SLSI**

In keeping with the national standard for drinking water, Pership Integrated Solutions applied for registration of its Silver Springs brand under “natural mineral water”, and as required, the source water and the finished product, together with the plant, its staff and environs were subject to stringent analysis based on the SLS 1038 standard. The water in particular was subjected to microbiological analysis as well as chemical analysis.

The source water and the finished product were found to conform to all levels of microbiological and chemical standards required. Therefore Silver Springs was able to set the benchmark for production of natural mineral water in Sri Lanka, as no other producer had conformed to the stringent analysis set forth by SLSI in its 1038 standard. Silver Springs was then awarded registration by MoH for bottled natural mineral water under the national standards set forth for same (CFA/NMW/07/2008-01), making Silver Springs Sri Lanka’s only locally produced natural mineral water.

In addition to the mandatory registration, Silver Springs was also awarded Sri Lanka Standard Institutions SLS 1038 : 2003 quality certification (permit # 751) making Silver Springs, Sri Lanka’s only SLSI certified bottled natural mineral water.
